## OCCUPATIONAL HEALTH ONSITE TESTING

# HEARING CONSERVATION SERVICES

The Occupational Safety and Health administration (OSHA) standard for occupational noise exposure requires audiometric testing for all employees exposed to a sound level at or above 85 decibels over an eight-hour Time Weighted Average.

Bellin Health offers two different service options to meet your testing needs onsite utilizing state of the art equipment. By bringing our expertise and equipment to your door, we work around your schedule. This keeps the flow of employees continuous with minimal time away from production.

### Mobile Clinic Testing

- Test up to 6 individuals every 10 min.
- Testing within temperature controlled 38 foot mobile clinic
- Private/confidential
- Hearing conservation education

### Quiet Room Testing

- Test up to 3 individuals every 15 min.
- Testing within plant in quiet room

### Benefits of Both Systems Include:

- Council of Accreditation on Occupational Health Hearing Conservation (CAOHC) certified onsite testing staff
- Benson audiometric testing equipment that delivers instructions for the subject in **18 different languages**
- Many reporting options including: real-time standard threshold shift results, notification letters, summary reports, company roster, etc
- Overseen by a board certified occupational health medical director
- Referral assistance to local audiologists for work relatedness determination for employees with greater than a 25 decibel standard threshold shift
- Out of the area employee data entry options
